...and 7000 Indians, and in 1810, the first census of the United States was taken, showing a population of 3,929,214. The population of the United States in 1820 was 4,553,214, and in 1830 it was 5,308,483. The population of the United States in 1840 was 6,964,641, and in 1850 it was 9,194,622. The population of the United States in 1860 was 12,232,242, and in 1870 it was 16,233,294. The population of the United States in 1880 was 23,174,852, and in 1890 it was 27,629,031. The population of the United States in 1900 was 31,341,928, and in 1910 it was 36,098,231. The population of the United States in 1920 was 42,728,661, and in 1930 it was 47,320,039. The population of the United States in 1940 was 50,189,219, and in 1950 it was 50,189,219.

It is a common mistake to suppose that the only way to get the most out of a book is to read it straight through from beginning to end. This is not necessarily the best method. A more effective way is to read the book in a more selective manner, focusing on the parts that are most relevant to your needs. This can be done by skimming the table of contents, looking for key words, and reading the introduction and conclusion. This will give you a good overview of the book and help you to decide which parts are most important to read in detail.

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

The purpose of the present study is to determine the effect of the use of a computer-aided instruction (CAI) program on the learning of the basic concepts of the theory of evolution.

These results show that the model is able to capture the main features of the data. The model is able to capture the main features of the data.

MAY 12 1900

ADVERTISEMENT.

THE Botanic Garden at Cambridge was intended for the cultivation of plants from various parts of the world, to facilitate the acquisition of botanical knowledge. It was also intended to receive all such indigenous trees, shrubs, and herbaceous plants, as are worthy of attention, as being useful in domestic economy, in the arts, or in medicine.

The present collection began with exotic plants, contributed by friends of the institution, who possessed green-houses in the vicinity, who, as they have acquired new plants, have generously continued to impart them.

Gentlemen who have visited tropical regions in the East and West Indies, and in Africa, have also presented plants and seeds; and seeds have been received from some of the Botanic Gardens in Europe. From all these sources, the collection is enriched with many very curious plants, which would be much valued any where.

In all establishments of this kind, it is usual to employ some person solely in collecting plants; but the funds of this institution have not been sufficient to meet such an expense, and no person has been engaged in this necessary employment, till the last summer, when a gentleman, skilled in plants, was partially occupied in introducing the indigenous productions.*

Hence the number of native plants is comparatively small; as their number increases, proper and acceptable returns will be made to foreign friends.

The plants of the twenty fourth Class are but few in number at present, but they will be increased. Some of the second Order have been used in dyeing, of the fourth and fifth in medicine. Of those of the sixth, seventh, and eighth Orders, very few are yet introduced.

These generally choose their own appropriate soil and exposure. They are objects rather of study than of culture; but whoever studies botany for the love of it, will find

* At the expense of the Trustees of the Agricultural Society.

his patient and laborious investigation of these admirable productions of Almighty wisdom, amply rewarded by the entertainment and gratification they will afford.

=

The first column in this catalogue is the number placed by the plant in the garden; the second column is the Latin name; the third, the English name; the fourth, its native place of growth; the fifth, its time of flowering; and the sixth, its duration.

=

The authors, whose names of plants occur here, are indicated by the following abbreviations.

Ach. <i>Acharius.</i>	H. R. M. <i>Hortus Re-</i>	Muhl. <i>Muhlenberg.</i>
Br. <i>Brown.</i>	<i>gius Madritensis.</i>	Pers. <i>Persoon.</i>
Cav. <i>Cavanilles.</i>	Lamb. <i>Lambert.</i>	P. <i>Pursh.</i>
Curt. <i>Curtis.</i>	L. <i>Linnaeus.</i>	Willd. <i>Willdenow.</i>
Desf. <i>Desfontaines.</i>	M. <i>Michaux.</i>	

=

☉ Marks the plants of annual duration.

♂ — the biennial plants.

♀ — the herbaceous perennials.

h — the trees and shrubs.

C. g. h. indicates the plants of the Cape of Good Hope.

=

REGULATIONS.

Members of the Board of Visitors, original Subscribers to the foundation of this Institution, the Governour and Legislature of the State, the Corporation, Board of Overseers, Professors and Instructors of Harvard College, strangers of distinction, and clergymen, are admitted to the Garden, gratis. Other visitors are admitted by tickets. An annual ticket of five dollars admits a family at any time through the year.

An annual ticket of two dollars admits a single person in the same manner. Tickets for occasional visits at twenty-five cents each person.

These may all be found at Messrs. Cummings & Hilliard's, Booksellers, No. 1, Cornhill, Boston, and at William Hilliard's, Bookseller, Cambridge. This Catalogue may also be obtained at these places, and of the gardener.

Living exotic plants may be purchased by applying to the gardener.
